CSM2 Turbine Mist Sprayer

Quiet and Versatile Spraying

For more than 50 years Buffalo Turbine has designed & built quality & powerful spraying equipment using our "Turbine Technology." The model CSM2 is effective when barrier spraying, larviciding & certain "knock-down" spraying applications are needed as well as for odor control on dump sites. The model CSM2 Mist Sprayer is instrumental in combating the West Nile Virus & other vector transmitted diseases. This unit is used to help control flies, mosquitoes & other annoyance bugs on dairy farms, horse farms, parks, military compounds, commercial & residential areas.

The Model CSM2 Mist Sprayer uses turbulent air to apply a thorough & wide range of coverage not possible by other sprayer units. This unit is capable of producing high volume and velocity of air which provides enough power & coverage to penetrate through deep, thick vegetation & tall trees. 100 - 150 feet or more coverage distances are attainable when using most liquids. Coverage distances with optional dust bin will vary depending on the material used. (The Altosid® XR pellets test propelled material up to 75')

Physical Specifications:

Overall Length: 66" w/ nozzle assembly
